6th European Congress of Pharmacology

Welcome

Dear friends and colleagues,

On behalf of the Spanish Society of Pharmacology it is a great honor to welcome you to Granada. It is my great pleasure to host the most important "pharmacological" event in Europe. This congress will be a wonderful opportunity to bring together all the pharmacologists that cover the whole process of drug development from "bench to bedside", that is basic pharmacology to clinical practice.

Every effort has been made to provide a balanced programme by inviting the most relevant speakers in the different fields of Pharmacology together with contributed oral and poster presentations. It has been planned to be attractive for all pharmacological scientists, with a special emphasis for young investigators. We will be more than 1000 people in what most certainly is going to be one of the most important events in the field.

First of all, I would like to thank the support to all the European Societies, together with the invited speakers for their efforts in promoting the congress. I also appreciate the exhibitors and sponsors participation and collaboration I would like to thank and congratulate all participants who made a scientific contribution to this conference, either by poster or oral presentation. Last but not least, I take this opportunity to thank the members of the local organizing committee and scientific committee for providing us not just an outstanding scientific programme but also a superb social programme, which will allow all participants to enjoy the magic atmosphere that makes Granada one of the most wonderful cities in the world.

I sincerely hope that the pleasant atmosphere of the conference venue and the legendary charm of Granada will be very stimulating for scientific and social exchange, and will contribute to the further development of pharmacology in Europe.

Once again: Welcome to Granada!

6th European Congress of Pharmacology

The City of Granada

From the time historical records began Granada was ruled by many Caliphs, Arabic sultans and dynasties. The Arabic/Moslem Empire once stretched right up into the north of Spain. The various Christian groups settled their differences, joined together and steadily drove the Arabs out of Spain. Granada was the last stronghold and finally succumbed to Isabel and Ferdinand (the catholic monarchs) in 1492. The Moslems and the Jews were forced to leave the country or convert to Christianity. A period of what would nowadays be described as ethnic cleansing ensued. At the same time Christopher Columbus came to Granada to ask Isabel and Ferdinand for a grant to build ships so that he could conquer the Americas. They gave him the money and I am sure you already know the rest.

The Alhambra

Granada has its usual quotient of churches, museums etc. typical for a southern European city. However, Granada has the Alhambra which is considered by some to be one of the 10 wonders of the world. In case you don't know, the Alhambra is a massive castle constructed over many centuries. It consists of gardens, fortifications and sumptuous palaces. It was the home of many of the Arab Sultans who ruled the whole province so I suppose for centuries it received the optimum in interior decoration and architecture.

The Albaicín

The Albaicín is the old Arabic quarter located on the hill opposite the Alhambra. It is characterized by cobble stoned streets with white washed houses. Despite several centuries of neglect and architectural barbarities allowed by the town council it still retains as a strong Arabic feeling (the Arabic population was ethnically cleansed just over 500 years ago). There are many squares with terrazas and places to laze about and have a bite to eat. The Albaicín is an oil painter's paradise and almost at every turn of the head there is an attractive view, almost always involving glimpses of the Alhambra.

Sacromonte, Flamenco and the Gypsies

The English wear bowler hats and read the Times, the Swiss make good watches, wear short leather trousers, climb mountains and yodel, Americans eat hamburgers, are not shy, drive big cars, and talk loud, the typical idea of a Spaniard is of a dark haired fiery gypsy woman dancing flamenco with a red rose clenched between her teeth with a bit of bullfighting going on in the background. All the national stereotypes are based on something and the Sacromonte is one of the places that gave rise to the connection between Spain and Flamenco.

The gypsies arrived about 600 years ago and one of the places where they congregated was in the caves of the Sacromonte. The mixture of Arabic influence combined with the particular lifestyle and temperament of the gypsies created Flamenco.

Gastronomy

Spanish cuisine is well known all around the world, Granada and its tapas could not be less. The province of Granada, located between mountains and sea, explains its rich and varied kitchen. The most known dishes are the Tortilla de Sacromonte, Habas Fritas con Jamón and Pollo al Ajillo. However, you cannot visit Granada without testing its Trevélez ham, its asparagus, its tropical fruit, its olive oil and its wine.

Perfusion and Muscle Strip Myographs for studies in Smooth & Striated Muscle research

PRESSURE MYOGRAPH SYSTEMS

This speciality line of myographs is used to study small vessel function under near physiological conditions of pressure and flow by digitally tracking diameter and flow in real-time. The products include single artery systems for diameter measurement under user-controlled pressure and flow conditions.

NEW DATA ACQUISITION SOFTWARE

- MyoVIEW II

MyoVIEW II is a new state-of-the-art software used in conjunction with Pressure and Culture Myograph Systems.

The core function of the MyoVIEW II is to acquire diameter measurements from pressurized vessels. Flow measurements using the FlowMeter 161FM are now integrated into this single software package and allow the user to perform constant flow experiments and parameters such as vascular resistance and shear stress.

WIRE MYOGRAPH SYSTEMS

Wire Myograph Systems are used to measure force in small rings of muscle tissue with diameters as small as 40 microns. This instrument range covers systems from a single channel system with an optical window for combining electrophysiology and imaging, to 4-channel high-throughput systems for pharmacological testing of compounds.

AUTOMATIC BUFFER FILLER SYSTEM - 625FS

An add-on filler system that provides an automatic, reliable and consistent way to replace buffer in the chambers of your 4-channel Myograph System.

MUSCLE STRIP MYOGRAPH SYSTEM

The 820MS represents a state-of-the-art 4-channel myograph system for muscle strips of up to 25 mm in length. Originally developed to give the skeletal muscle physiologist a sophisticated, high through-put muscle myograph, the rectangular design of the chamber gives this system the flexibility to mount larger, longer muscle strips of a variety of organs.

SECUENCIACIÓN DEL EXOMA COMPLETO

Descripción:

La caracterización del exoma completo de un individuo permite la búsqueda e identificación de genes causantes de enfermedad así como la determinación de variantes que incrementan el riesgo de padecer ciertas enfermedades proporcionando una herramienta de análisis de gran valor tanto en proyectos de investigación como en estudios de diagnóstico.

Ventajas:

La secuenciación del exoma completo mediante técnicas de secuenciación masiva ofrece además las siguientes ventajas: Resultados en pocas semanas. La secuenciación es rápida y eficiente. Se capturan tanto variantes comunes como variantes raras.

Resultados:

Mapeo de las lecturas frente al genoma de referencia. Identificación y anotación de variantes mediante la integración de distintos recursos tanto públicos como privados con el fin de priorizar las variantes y genes candidatos en función de los objetivos del estudio. Identificación de relaciones gen-enfermedad. Localización de rutas metabólicas afectadas.

RNASeq: SECUENCIACIÓN DEL TRANSCRIPTOMA COMPLETO

Descripción:

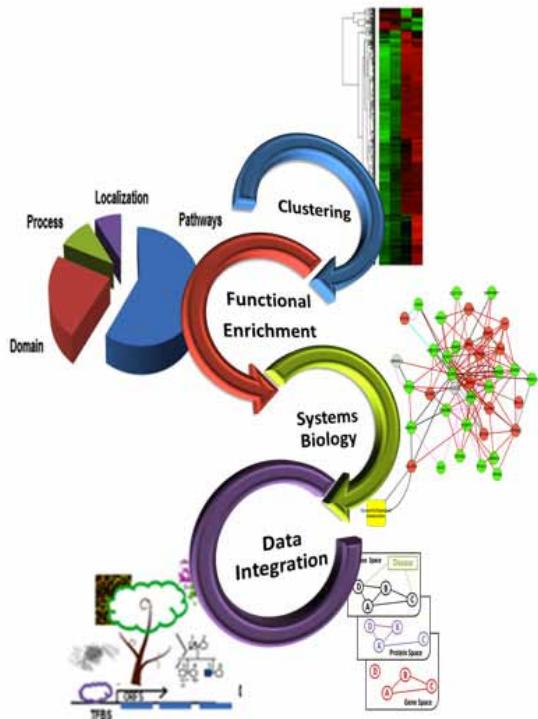

Se conoce como "RNA-Seq" a la secuenciación masiva de cDNA mediante plataformas de alto rendimiento cuyo objetivo final es la obtención de la información global sobre el contenido de RNA de una muestra, incluyendo mRNAs, rRNAs, tRNAs y otros RNAs no codificantes, compuesta por una única célula o conjunto de células. Gracias a la eficacia, reproducibilidad y rendimiento de las plataformas de secuenciación masiva de última generación, la técnica de RNA-Seq proporciona a los investigadores una forma eficiente de medir niveles de expresión génica, identificar eventos de splicing alternativo, identificar eventos de fusión génica e identificar SNVs de manera simultánea a la vez que se reduce el precio por muestra.

Ventajas:

Resultados en muy pocas semanas. Es posible identificar nuevos transcritos y genes de fusión. Aplicable en organismos no modelo.

Resultados:

Mapeo de las lecturas frente al genoma de referencia o ensamblaje 'de novo' en caso de no existir referencia (organismo no-modo). Identificación y cuantificación de transcritos conocidos y nuevos. Identificación de genes de fusión. Análisis de la expresión diferencial entre grupos de muestras. Estudios funcionales. Clustering. Biología de Sistemas y redes de coexpresión.

Corning® Synthemax™ Surface

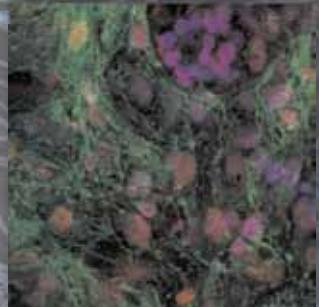

Synthemax-T Surface is a unique synthetic surface coated onto multiple well plates and flasks that mimics the natural cell environment. This surface supports the expansion of Stem Cells in their undifferentiated state and enables directed differentiation into specialized cell types.

Oct4 immunostaining of H7 hESC cells demonstrates the cells remain undifferentiated after 10 serial passages on Corning Synthemax-T Surface multiple well plates.

H7 hESC differentiated to cardiomyocytes on Corning Synthemax-T Surface multiple well plates, as demonstrated by immunostaining of α -actinin (green, actin filaments), Nkx2.5 (red, cardiac-specific marker) and DAPI (blue, nucleus).
